

DATA DICTIONARY

Contents

1. DATA DICTIONARY

The data dictionary lists all the fields that can be used in a payment form.

First, is presents the main categories (such as technical information, order details, etc.). All the fields that belong to a category are presented.

These tables are presented as follows:

- Field name: indicates the name of the parameter as it appears in the HTTP request
- Format: data format
- **Description**: description of the field
- Input: a field to be transmitted in the request
- Output: a field transmitted in the response

The data dictionary also presents the details for each field. Each field is presented as follows:

- Description: description of the field
- Format: data format (see the table List of fields and formats below)
- Possible values: expected values when the field must be populated with specific values
- Example: example of correct data encoding
- Error code: in case there is a error between the merchant website and the payment gateway, the payment gateway indicates the incorrect parameter in the vads_extra_result field using a numeric code
- Note: additional information, elaboration
- **Category**: category to which the field belongs

Precisions on error codes:

An **error code** corresponds to the error number when an incorrect payment form is being submitted.

- In test mode this code will be displayed on the payment page.
- In production mode a warning e-mail will be sent specifying the error code and the name of the incorrect parameter.

Example: Error 09 corresponds to a payment amount error. The submitted amount does not respect the required format.

vads_currency

Description Numeric currency code to be used for the payment, in compliance with the ISO 4217 standard.

payment in a foreign currency chapter of integration guide.

To use a currency other than euro (978), you must request the activation of the "multi-currency display" option.

Payment in foreign currency with conversion allows Merchants to present price catalogs in different currencies, but without having to manage their finances in currencies different from the ones specified in their contract. With this option, when the gateway receives the amount in a currency not managed by your MIDs, it makes a conversion to the company's currency based on the daily exchange rate provided by Visa. vads_extra_result

Description

Risk assessment result (specific to shops that have enabled the feature). Its meaning depends on the value entered in **vads_result**.

• If vads_result equals 30 (request error), then vads_extra_result contains the numeric code of the field with an error in the value or the format. This value can be set to 99 in case of an unknown error in the request.

Example: if **vads_extra_result** contains the value 09, it means that the amount specified in **vads_amount** is incorrect (for example, if the amount contains decimals, as it would not have been converted to cents in advance).

• If vads_result equals 05 (declined) or 00 (accepted), vads_extra_result contains the numeric code of the risk management result.

Code	Description
Empty	No verification completed.
00	All the verification processes have been successfully completed.
02	Credit card velocity exceeded.
03	The card is on the Merchant's greylist.
04	The country of origin of the card is on the Merchant's greylist.
05	The IP address is on the Merchant's greylist.
06	The BIN code is on the Merchant's greylist.
07	Detection of an e-carte bleue.
08	Detection of a national commercial card.
09	Detection of a foreign commercial card.
14	Detection of a card that requires systematic authorization.
20	Relevance verification: countries do not match (country IP address, card country, buyer's country).
30	The country of the this IP address is on the greylist.
99	Technical issue encountered by the server during a local verification process.

Output field, returned in the response (IPN and Return URL).

vads_payment_config

Description	Defines the type of payment: immediate or installment.
	 For a single payment, the value must be set to SINGLE.
	 For an installment payment with fixed amounts and dates, the value must be set to MULTI: followed by key=value pairs separated by the ";" character.
	The parameters are:
	 "first" indicates the amount of the first installment (populated in the smallest unit of the currency).
	 "count" indicates the total number of installments.
	 "period" indicates the number of days between 2 installments.
	The field order associated with MULTI must be respected.
	 For an installment payment with a customized installment schedule, the value must be set to MULTI_EXT: followed by the date=amount pairs separated by the ";" character.
	The dates must not be in the past.
	Using the MULTI_EXT value requires a subscription to the Advanced installment payment option.
	<u>Note</u> : The value of vads_capture_delay is not taken into account in the case of payment in installments MULTI_EXT .
	Input and output field, returned in the response (IPN and Return URL).
Format	enum
Error code	07
Possible values	• SINGLE
	 MULTI:first= initial_amount;count=installments_nb ;period=interval_in_days
	 MULTI_EXT:date1=amount1;date2=amount2;date3=amount3
Example 1	MULTI allows to define an installment payment.
	The amount of each installment corresponds to the total amount divided by the number of installments.
	The amount of the first installment can be different, it can be specified in first parameter.
	In case the remaining amount does not equal zero, it will be added up to the amount of the last installment.
	Payment request:
	 vads_capture_delay=2
	 vads_currency=978
	 vads_amount=20000
	 vads_payment_config=MULTI:first=10000;count=4;period=30
	<u>Result:</u>

A first payment of EUR 100.00 will be captured by the bank in 2 days (vads_capture_delay).

A second payment of EUR 33.33 will be made in 32 days (vads_capture_delay + period).

A third payment of EUR 33.33 will be made in 62 days.

A fourth payment of EUR 33.34 will be made in 92 days.

The total amount is EUR 200.00 (vads_amount= 20000). The remaining amount has been added to the amount of the last installment.

This instruction allows to immediately create 4 payments with the same transaction number but different sequence numbers (vads_sequence_number).

Example 2 MULTI_EXT allows to define a customized installment schedule. You will be able to define the amount of each installment.

MULTI_EXT : payment request:

- vads_currency=978
- vads_amount=19050
- vads_payment_config= MULTI_EXT:20150601 =10000; 20150701 =4525; 20150808 =4525

Result:

The first payment of EUR 100.00 is scheduled for June 1st 2015.

The second payment of EUR 45.25 is scheduled for July 1st 2015.

The last payment of EUR 45.25 is scheduled for August 8th 2015.

Note:

The total amount must be equal to the value of the **vads_amount** field. The date of the last installment cannot be later than 12 months after the date when the form was submitted. If the last installment is scheduled later than the card expiry date, no installment will be registered and the buyer will be notified about this issue.

vads_sequence_number

Description

Transaction sequence number.

Case of single payment (vads_payment_config=SINGLE)

vads_sequence_number is populated with 1 in case of single payment.

However, if the merchant has authorized several payment attempts after a rejected payment, the sequence number will be incremented upon each new attempt.

The number of additional attempts after a rejected payment can be configured via the Merchant Back Office (menu **Settings** > **Shop** > **Configuration**).

If vads_payment_config = SINGLE:

vads_url_check_src	vads_sequence_numbe	Description
PAY	1	Payment made in 1 attempt
rai -	2	Payment made in 2 attempts

vads_url_check_src	vads_sequence_numbe Description	
	3	Payment made in 3 attempts
	1	Deferred payment made in 1 attempt
BATCH_AUTO	2	Deferred payment made in 2 attempts
	3	Deferred payment made in 3 attempts

Case of installment payment (vads payment config=MULTI)

With the application of Soft Decline, the **vads_sequence_number** field no longer allows to easily identify the first installment of a payment in installments.

To identify the first payment of a series, view the description of the **vads_occurrence_type** field.

Case of a cascading payment (vads_card_brand=MULTI)

In case of a cascading payment (the cart items are paid with several payment methods), the **vads_sequence_number** field is always set to **0**.

The **vads_payment_seq** field describes each transaction in a table in JSON format.

The **transaction[x].sequence_number** attribute takes the same values as the **vads_sequence_number** field, as described for the case of single payment.

Note:

The **vads_sequence_number** field is not returned in the response when a payment is canceled or abandoned.

Output field, returned in the response (IPN and Return URL).

vads_sub_desc

Description Mandatory parameter used for creating a recurring payment.

It designates the recurring payment rule to be applied.

The expected value for this parameter is a chain of characters that comply with the **iCalendar** (Internet Calendar) specification, described in RFC5545 (see *http://tools.ietf.org/html/rfc5545*).

Among other aspects, this specification allows to define complex recurring payment rules via the **RRULE** property.

For technical reasons, it is not possible to define recurring payment periods that are shorter than one day.

The keywords "SECONDLY" / "MINUTELY" / "HOURLY" are not taken into account.

Examples:

• To program installment payments taking place on the last day of each month for 12 months, the rule is:

RRULE:FREQ=MONTHLY;BYMONTHDAY=28,29,30,31;BYSETPOS=-1;COUNT=12

This rule means that if the current month does not have 31 days, the machine will take the 30th into account. If there is no 30th day in a month, the machine will take the 29th into account, and so on until the 28th.

Another	version	of	this	rule:
RRULE:FREQ=MONT	HLY;COUNT=5;BYMC	ONTHDAY=-1		

- To program installment payments on the 10th of each month for 12 months, the rule is: **RRULE:FREQ=MONTHLY;COUNT=12;BYMONTHDAY=10**
- To program installment payments every three months up to December 31st, 2016.

RRULE:FREQ=YEARLY;BYMONTHDAY=-1;BYMONTH=1,4,7,10;UNTIL=20161231

The installment payments will be due on the first day of January, April, July and October each year. The total number of installments depends on the recurring payment start date (see **vads_sub_effect_date** parameter).

	 In order to define a weekly recurring payment to be made every Monday: RRULE:FREQ=WEEKLY;BYDAY=MO
	The installments will be made every Monday. Note that the first installment will occur the nearest Monday.
	 In order to define a weekly recurring payment: RRULE:FREQ=WEEKLY The installments will occur on the same day if the due date is set to "today",
	then every 7 days.
	 In order to define a recurring payment every two weeks on Monday, with maximum 4 installments: RRULE:FREQ=WEEKLY;INTERVAL=2;COUNT=4;BYDAY=MO
	 In order to define a recurring payment every two weeks, on the same day and every 7 days: RRULE:FREQ=WEEKLY;INTERVAL=2;
	• For more information and examples, visit <i>http://recurrance.sourceforge.net/</i> .
	Input and output field, returned in the response (IPN and Return URL).

vads sub effect date

Description	Subscription start date (or effective date) in the UTC time zone, in YYYYMMDD format.
	Mandatory parameter used for creating a recurring payment.
	This parameter does not always match with the date of the first installment that depends only on the vads_sub_desc parameter.
	Example: for 1 February 2015, use 20150201.
	Input and output field, returned in the response (IPN and Return URL).
Format	n8
Error code	69
Category	Subscription details.
vads_sub_init_am	iount
Description	Optional parameter used for creating a subscription. Represents the amount of the <u>first installments</u> of the recurring payment.
	The number of these first installments is defined by the vads_sub_init_amount_number parameter.

This amount is presented in the currency defined by the vads_sub_currency parameter and is expressed in its smallest unit (cent for euro).

E.g.: for an amount of 10 euros and 28 cents, the value of the parameter is 1028.

The value may be empty but cannot be negative or equal to 0.

Input and output field, returned in the response (IPN and Return URL).

vads sub init amount number

Description Optional parameter used for creating a recurring payment. Number of installments for which the vads_sub_init_amount should be applied. Once these installments will have expired, the **vads_sub_amount** field will be used. Example: to define a recurring payment with the first 3 installments of EUR 45.25 , and the rest of the installments of EUR 75.90, the following values will be used: vads_sub_currency = 978 ٠ vads sub init amount number = 3 • vads_sub_init_amount = 4525 vads_sub_amount = 7590 Input and output field, returned in the response (IPN and Return URL). n..3

Format	an255		
Category	Transaction details.		
vads_token_id			
Description	Payment order ID associated with the transaction.		
	Corresponds to the paymentOrderId fields in the REST API. It allows the Merchant to follow-up orders that they generated using the PaymentOrder/Get Web Service.		
	Output field, returned in the response (IPN and Return URL).		

Format	ans255	
Category	Order details.	
vads_totalamount	_vat	
Description	Allows to define the total amount of taxes applied to the whole order.	
	The value must be specified in the smallest currency unit (cents for euro).	
	Input and output field, returned in the response (IPN and Return URL).	
Format	n12	
Error code	154	
Category	Order details.	

vads_trans_date

Description	Mandatory parameter.
	Corresponds to the timestamp in the YYYYMMDDHHMMSS format.
	The timestamp must necessarily correspond to the current date and time, in the GMT + 0 (or UTC) time zone in 24h format.
	Note:
	If you are using REST payment web services, the equivalent of the vads_trans_date parameter is transactions[0].transactionDetails.cardDetails.legacyTransDate .
	Input and output field, returned in the response (IPN and Return URL).
Format	n14
Error code	04
	Frequent errors:
	 The date has not been submitted in the YYYYMMDDHHMMSS format (year, month, day, hour, minute, second).
	• The date is not based on the UTC time zone (Coordinated Universal Time).
	Make sure you use date functions in your programming language that will generate a UTC hour (e.g.: gmdate in PHP).
	• The time must be calculated using the 24h format, not 12h.
	 The buyer has waited for too long before clicking on Pay.
	The buyer was using browser history.
Category	Transaction details.

vads_trans_id

Description	Mandatory parameter.		
	It consists of 6 alphanumeric characters and must be unique for each transaction for a given shop on the same day.		
	<u>Note</u> : the uniqueness of the transaction identifier is based on the universal time (UTC).		
	The merchant website must guarantee this uniqueness during same the day.		
	The range between 900000 and 9999999 is reserved to the payment gateway, for the transactions made via:		
	• the Merchant Back Office (refunds, duplications, manual payment, etc.),		
	the data collection form,		
	a payment order.		
	Input and output field, returned in the response (IPN and Return URL).		
Format	an6		
Error code	03		
	Frequent errors:		
	The form is rejected:		
	If the transmitted value contains less than 6 characters.		
	If the value is null.		
	If the field is absent.		
	 If an identical transaction number has already been sent on the same day. If the buyer clicks "Cancel and return to the shop", the transaction number must be different for the next attempt as the previous one will be considered as already used. 		
	Otherwise, the "The transaction has been canceled" message will appear.		
Category	Transaction details.		

vads_trans_status

Description Allows to set the status of the transaction.

Output field, returned in the response (IPN and Return URL).

Format

enum

Possible values

Value	Description
ABANDONED	Abandoned
	Payment abandoned by the buyer
	The transaction has not been created, and therefore cannot
	be viewed in the Merchant Back Office.
ACCEPTED	Accepted.
	Status of a VERIFICATION type transaction for which the
	authorization request or information request has been
	successfully completed. This status cannot evolve.
	Transactions with the "ACCEPTED" status will never be
	captured.
AUTHORISED	Waiting for capture
	The transaction has been accepted and will be automatically
	captured at the bank on the expected date.
AUTHORISED_TO_VALIDATE	To be validated
	The transaction, created with manual validation, is
	authorized. The merchant must manually validate the
	transaction in order for it to be captured.
	The transaction can be validated as long as the expiration
	date of the authorization request has not passed. If the authorization validity period has passed, the payment status
	changes to EXPIRED . The Expired status is final.
CANCELLED	Canceled
	The transaction has been canceled by the Merchant.
CAPTURED	Captured
	The transaction has been captured by the bank.
CAPTURE_FAILED	Capture failed
_	Contact the technical support.
EXPIRED	Expired
	This status appears in the lifecycle of a payment with
	deferred capture.
	The expiry date of the authorization request has passed and
	the merchant has not validated the transaction. The account
	of the cardholder will therefore not be debited.
REFUSED	Refused
	The transaction is refused.
SUSPENDED	Suspended
	The capture of the transaction is temporarily blocked by the
	acquirer (AMEX GLOBAL or SECURE TRADING). Once the
	transaction has been correctly captured, its status changes to CAPTURED .
UNDER_VERIFICATION	Control in progress
	Waiting for the response from the acquirer.
	This status is temporary.
	A notification will be sent to the merchant website to inform
	the Merchant of the status change.
	Requires the activation of the Instant Payment Notification
	URL on batch change notification rule.
WAITING_AUTHORISATION	Waiting for authorization
	The capture delay in the bank exceeds the authorization
	validity period.

Value	Description
WAITING_AUTHORISATION_TO_VALIDATE	To be validated and authorized
	The capture delay in the bank exceeds the authorization validity period.
	A EUR 1 (or information request about the CB network if the acquirer supports it) authorization has been accepted. The merchant must manually validate the transaction for the authorization request and the capture to occur.

Category	Redirection to the merchant website.

vads_url_post_wallet

Description This field allows the merchant to transmit the URL to which the buyer will be redirected during a payment via a wallet in two steps.

This URL is used for transmitting information relative to the buyer's choice (e-mail, shipping address, payment method, etc.).

Based on these elements, the merchant can decide what to do (adjust the shipping fees, register the payment method, etc.) before allowing the buyer to finalize his or her payment.

The details will be transmitted to the merchant website via an html POST form.

Example: vads_url_post_wallet = https://mydomain-name.com/return_url

Note

If the URL is inaccessible, the transaction cannot be finalized. After the payment session expires, a **rejected** transaction will be created. If the merchant has configured the notification rule for abandoned/canceled transactions, the merchant website will be notified about the reason of rejection via the **vads_payment_error** field. This field will be set to **149** indicating that the payment session has expired.

It will then become visible in the Merchant Back Office, in the **Event log** tab.
